Objective

AI Engineer who likes taking models from experiment to a working system. Hands-on with reinforcement learning (a LinUCB contextual bandit for in-app personalization, Deep Q-Networks), computer vision, and speech and LLM pipelines, and with building services on FastAPI, Redis, Docker, and AWS. I measure results against baselines on held-out data, so the numbers show whether a model really helps.

Education

FPT University Bachelor of Artificial Intelligence 2022 – 2026

GPA: **3.2/4.0** | Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Database Systems, Computer Vision, Natural Language Processing, Artificial Intelligence, Probability & Statistics.

Activities & Programs

AI Talent Practical Training Program (20K AI): VinUniversity | Vingroup

Selected participant in Vingroup's intensive AI talent development program, with training focused on AI Applications, AI & Data Infrastructure, and AI Business & Product. Completed hands-on technical training and progressed to the industry-based practical phase at VinSmartFuture.

Experience

AI Intern VinSmartFuture, KD&VH – GSM May 2026 – Aug 2026

Designed and implemented an **AI Decision Engine** for personalized in-app popup delivery on the **Green SM HOME** screen, combining rule-based eligibility and frequency controls with a **Disjoint LinUCB contextual bandit** to select the most relevant campaign or return **NO_SHOW**. Developed a **16-dimensional contextual feature pipeline** based on user behavior, interaction history, time, and campaign attributes, with click/dismiss feedback for model learning. Contributed to the decision pipeline using **FastAPI**, **Redis-based atomic frequency control**, and **shadow-mode evaluation** with rule-based fallback and UX/latency guardrails.

AWS Student Intern Amazon Web Services (AWS) Sep 2025 – Dec 2025

Worked with core AWS services including **EC2, S3, RDS, IAM, VPC** and **CloudWatch** to deploy, manage, secure, and monitor cloud-based applications and infrastructure. Gained hands-on experience configuring compute, storage, databases, access control, networking, and monitoring for AI/ML workloads.

Projects

Snake RL: Zero-Shot Transfer with Dueling Double DQN *(team of 2)* Github

Trained a Dueling Double DQN agent in PyTorch on one 30×30 Snake level for 14.3M steps, then tested the frozen policy on five unseen levels with different board sizes and obstacles. A 27-feature state that does not depend on board size lets one network play every level. Over 100 greedy episodes per level, it reached the target score in 93–100% of episodes on the three smaller boards and in 74% and 54% on the two larger ones; a random policy never did.

Coin Counting with Classical Image Processing *(team of 3)* Github

Built a training-free pipeline that counts and sizes coins, with core algorithms (Otsu, morphology, connected-component labeling) written from scratch in NumPy and checked against OpenCV. Swapped Otsu for Lab background subtraction, Triangle thresholding, and watershed splitting. On a held-out test set of 480 real images (3,386 coins), F1 rose from 0.45 to 0.94 and exact-count accuracy from 12.9% to 65.4% over an Otsu baseline, at ∼65 ms per image.

Automated Meeting Summarizer Github

Built a Streamlit app that turns a meeting recording of any length into a speaker-labeled transcript and structured summary. Whisper-small transcribes 30-second windows with 5-second overlap and drops repeated words at the seams; pyannote 3.1 labels speakers. Gemini 2.0 Flash writes topics, decisions, and action items, with a rule-based fallback.

Tools & Skills

Programming: Python, JavaScript, TypeScript
AI & Machine Learning: PyTorch, Scikit-learn, Machine Learning, Deep Learning, Reinforcement Learning, Natural Language Processing (NLP), Computer Vision, Speech Processing
Data Processing & Visualization: Pandas, NumPy, Matplotlib, OpenCV
Cloud & Deployment: AWS (EC2, S3, RDS, IAM, VPC, CloudWatch), Docker, Render, NGINX, Cloudflare R2
Databases & Infrastructure: Redis, Relational Databases, Vector Databases
Development Tools: Git, GitHub, REST APIs

Certifications

Deep Learning Specialization, Natural Language Processing – Coursera
AWS Certified Cloud Practitioner – Amazon Web Services
Gemini Certified Educator – Google
